| 2 | 12 | 3 | The vendor should supply Software and Licenses mentioned below as per the parameters shared by the Bank (in consultation with the application team) along with RAID configuration.                           | Please confirm whether RAID configuration is required only at the physical server level—to protect against hardware disk failures—and not within Nutanix virtual machines, since Nutanix's distributed storage fabric already provides redundancy and fault tolerance without the need for VM-level RAID.                  | It is clarified that RAID configuration is required only at the physical server.                                                                                                                                |
| 3 | 12 | 8 | The vendor has to extend support and carry out all the installation/re installation and configuration/re- configuration and integration, if required, as per the requirements of application provider/ Bank. | Since the Bank has requested <b>integration support</b> , it implies that if the application needs to connect with other systems, multiple steps will be involved in the integration process. Therefore, the Bank is requested to clearly specify the exact type of <b>integration support</b> it expects from the vendor. | First time integration support will require and if the application vendor successfully able to run the application within itself or able to connect the third party applications then the same may not require. |
